

EZCoat PC35

Pre-Coating Compound

Description

EZCoat PC35 is a borax free product formulated to provide a tenacious coating on ferrous rod with the moisture resistance characteristics for wire processing in humid plant conditions. EZCoat PC35 is as a single-step coating and lubricant carrier, containing specially selected polymers and wetting agents to form a heavier coating when compared to other alkaline pre-coats. This coating will not gel up in your tanks when cooled allowing coating system to be shut off when not in use saving energy.

Applications

EZCoat PC35 is a single-stage, one-tank coating compound that is easy to control by a hydrometer testing procedure and easily removed in alkaline or hot water cleaning. It may be used in a cleaning house dip tank or strand immersion applications. EZCoat PC35 gives superior drawability when compared to borax.

Operating Parameters

Parameters	
Concentration	15 - 30 ounces per gallon of water
Bath Temperature	100° - 210° F

The concentration can be determined using a 0-26° Be' hydrometer. A conversion chart is available from your Aztech Lubricants representative.

Properties

Properties	
Appearance	Off white free-flowing powder
Solubility	Water soluble

Packaging

EZCoat PC35 is available in a 55-gallon drum.
